OBJECTIVE

I am a Third-year B.Tech student in Artificial Intelligence and Data Science with hands-on experience in Python, Machine Learning, and backend development using Flask and FastAPI. Built real-time computer vision systems and predictive models for traffic monitoring and environmental analysis. Seeking Python Developer / ML Engineer / AI Intern roles.

EDUCATION

B.Tech – Artificial Intelligence & Data Science, SRKR Engineering college
CGPA: 8.6 (up to V semester)

Intermediate, Narayana Junior College (94%) 2021 - 2023
SSC, St.Ann's English Medium School (98%) 2020 - 2021

SKILLS

Languages:	Python, Java, C, SQL, JavaScript
Machine Learning:	Scikit-learn, TensorFlow, NumPy, Pandas, Data Preprocessing
Backend:	Flask, FastAPI, REST API Development
Computer Vision:	OpenCV, Object Detection
Frontend:	React, HTML, CSS

PROJECTS

Traffic Violation Detection System Using Python, OpenCV and Deep Learning [GitHub](#)

- Developed a real-time traffic violation detection system using Python, OpenCV, and deep learning with CCTV integration.
- Applied computer vision and object detection techniques (real-time detection) to identify violations such as signal jumping.
- Built REST APIs using Flask/FastAPI and integrated Twilio for automated alerts.

Coastal Erosion Detection and Prediction Using Multi-Temporal Satellite Imagery and ML [GitHub](#)

- Developed a shoreline analysis pipeline using 20+ years of Landsat and Sentinel satellite imagery processed through Google Earth Engine.
- Achieved 97% prediction accuracy while estimating a mean shoreline change rate of 0.51 m/year.
- Performed transect-based shoreline change analysis across 100+ coastal segments.
- Applied regression-based forecasting techniques to identify high-risk erosion zones.

Water Quality Prediction Using Machine Learning [GitHub](#)

- Developed a machine learning model using Python and Scikit-learn to predict water quality based on environmental parameters.
- Performed data preprocessing, feature engineering, and exploratory data analysis using Pandas and NumPy.
- Applied classification algorithms such as Logistic Regression and Random Forest to improve prediction accuracy.

ACCOMPLISHMENTS

- Selected for Smart India Hackathon 2025 (Disaster Management domain), securing a position among the top teams shortlisted from 300+ entries in the internal selection round.
- Collaborated with the Civil Engineering department to analyze coastal dynamics in the Chinna Gollapalem region using data science and geospatial analysis.

CERTIFICATIONS

- Generative AI, Deep Learning & Language Models Internship – EduSkills
- AI-ML Virtual Internship – Google for Developers & EduSkills (Oct–Dec 2025)
- Python – Cisco
- IoT – NPTEL (IIT Kharagpur)
- Data Analytics – Deloitte
